

Dear Colleague,
we are conducting a survey about:

Current Application of the European evidence-based guidelines on *pancreatic cystic tumors*

As you may know, *the prevalence of pancreatic cysts is increasing!*

European guidelines are the *only evidence-based guidelines available*, but we do not know how much they have been integrated into clinical practice in the European context. Thus, we would like to assess your practice patterns in the management of pancreatic cystic tumors.

<http://pancreasverona-ebm.bluemilk.cloud/guidelines-on-pancreatic-cystic-tumours>

By clicking on the above link, you will be able to register and **complete the survey**.

... but there is MORE ...

We have created *iCyst*, the App designed to assist your clinical practice on pancreatic cystic neoplasms! *Navigate through the guidelines and get patient-specific recommendations thanks to the interactive tools.*

Totally for free!

We truly value your input and appreciate your time in **completing the survey** and downloading **iCyst!**

Kind regards,

Giovanni Marchegiani, M.D., PhD
